

Intelligent/Smart Key and Lock Security Solutions for Offices and Corporate Environments

The Brief

24 Hour protection of business information is extremely important. Because of this, office buildings and corporate environments call for a high level of security. Office security solutions including securing doors as well as physical and logical access control need to be flexible; they need to handle personnel flow with varying access permissions throughout the day.

Large, global corporations may require a global access control system for all premises, which can be managed and controlled remotely. There is also demand for convenience and ease of use for the employees who spend their days in the office – access control systems make this possible. Access control systems can include smart or intelligent keys, which can be used for a variety of applications including logical and physical access.

Main Entrance

Physical access solutions using smart or intelligent keys for the main entrance to a corporate building or office ensure that only authorised personnel have access and granted entry.

Office Room Access

Securing doors and hardware in office rooms ensure the safety of information and valuables when unattended. Physical access solutions using smart or intelligent keys for secure identification can also be integrated for office room access, ensuring that only authorised employees gain access to office areas.

Conference Rooms

Smart or intelligent keys can also be used to allow employees access to conference rooms. Security doors and hardware ensure that unauthorised personnel cannot gain access during an important meeting or conference.

The Client

**John Gale,
TMP South Africa
Ruskin House**

I found the solution to key and access management of the 11 Floor, Ruskin House in Yebotech electronic key and lock system. With an easy and well supported retro fit at minimal disruption to tenants we have an effective master key access control system with full audit trail functionality.

The ease with which I can now allow and restrict access for multiple, and sometimes changing clients and staff, is a real pleasure. The added convenience of never having to change the locks and always being able to issue the perfect key is of real value.
