

- Housing IP67 with no breaks (totally protected from dust ingress, short periods of immersion in water)
- No mechanical components – interact using touch or NFC
- No electrical contacts, interacts with plug using embedded inductor
- All-metal plug-key mechanical interface, nothing fragile to break
- NFC provides means of managing key using a smart phone / syncing key with central server / sending or acquiring remote authorizations
- Beeper provides audible notification of errors or restricted conditions such as checkpoint or multikey access

* Battery life depends on configured functions (e.g. touch interface enabled or only managed via sync station); and type of lockset access. Results from preliminary estimates and testing, subject to change.
